**Step 1:** If an even number is followed by an odd number then the resultant will be the addition of both the numbers.

**Step 2:** If an odd number is followed by a perfect square then the resultant will be the difference of that square number and the odd number.

**Step 3:** If an odd number is followed by another odd number (but not a perfect square) then the resultant will be the addition of both the numbers.

**Step 4:** If an odd number is followed by an even number (but not a perfect square) then the resultant comes by multiplying the numbers.

**Step 5:** If an even number is followed by another even number then the resultant will be the division of first number by the second number.

Find the difference between the resultant of first and second row.

$$\begin{array}{r} 13 \\ 4 \end{array} \quad \begin{array}{r} 3 \\ 11 \end{array}$$
