26-28. An ecosystem is a group of animals and plants living in a specific region and interacting with one another and with their physical environment. Ecosystems include physical and chemical components, such as soils, water, and nutrients that support the organisms living there. These organisms may range from large animals to microscopic bacteria. Ecosystems also can be thought of as the interactions among all organisms in a given habitat; for instance, one species may serve as food for another. People are part of the ecosystems where they live and work. Human activities can harm or destroy local ecosystems unless actions such as land development for housing or businesses are carefully planned to conserve and sustain the ecology of the area. An important part of ecosystem management involves finding ways to protect and enhance economic and social well-being while protecting local ecosystems.

26. What is the main idea of the passage? *Key word.*

- ~~a.~~ An ecosystem is a community that includes animals, plants, and microscopic bacteria.
- ~~b.~~ Human activities can do great damage to local ecosystems, so human communities should be cautiously planned.
- ~~c.~~ In managing the ecology of an area, it is important to protect both human interests and the interests of other members of local ecosystems.
- ~~d.~~ People should remember that they are a part of the ecosystems where they live and work.
