Aryan(learn & share) 1 day ago

Asphyxiation ---smother  
Overzealous ---fanatical

Mini Chaubey 1 day ago

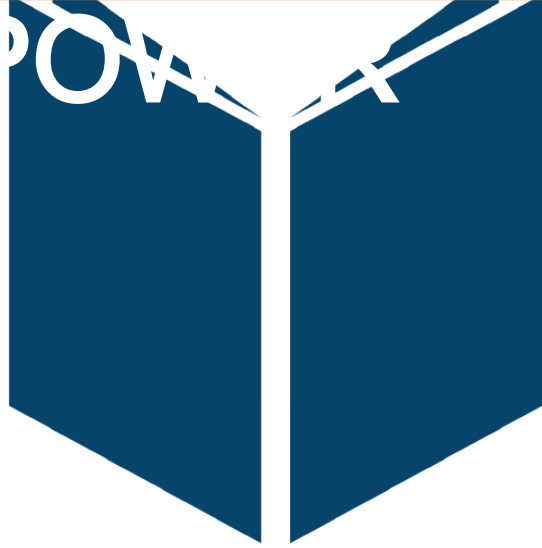

Overzealous = restless

# TODAY'S QUOTE

The greater danger for most of us is not that our aim is too high and we miss it, but that it is too low and we reach it

WORD

REVISION

Sanitation(Noun):

सफ़ाई / Hygiene

Suffice(Verb)

पर्याप्त / Sufficient

:

Nodal(Adj.):

निःस्पंद/ Knob

Liaise(Verb):

संबंध जोड़ना /  
Collaborate

Contamination(Noun):

दूषितकरण/ Pollutant

# REVISION

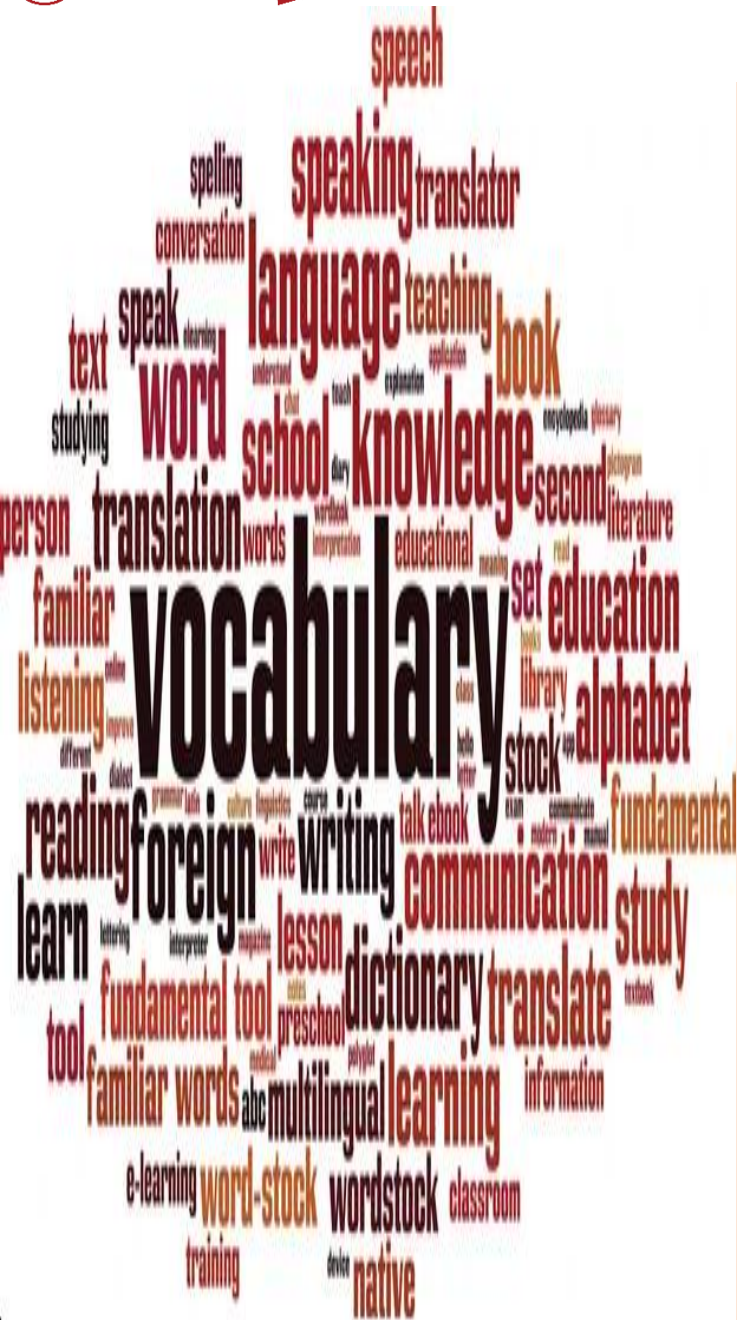

Stampede(Noun):	भगदड़ / Rush
-----------------	--------------

Dehumanizing(Verb):	अमानवीय / Perverting
---------------------	----------------------

Scamper(Verb):	दौड़ / Scuttle
----------------	----------------

Reminiscent(Adjective):	याद दिलाने वाला / Evocative
-------------------------	-----------------------------

Hooliganism(Noun):	बदमाशी / Misconduct
--------------------	---------------------

# THE HINDU VOCABULARY

**Exhuming(Verb): प्रकाश में लाना**

**Meaning: To remove (a body) from the place where it is buried.**

**Synonyms: Disinter , Unbury**

**Antonyms: Entomb , Inhume**

**Sentence : The police exhumed a dead body for postmortem.**

**Shun(Verb): दूर रहना**

**Meaning: Deliberately avoid a person, place, or activity.**

**Synonyms: Elude , Shirk**

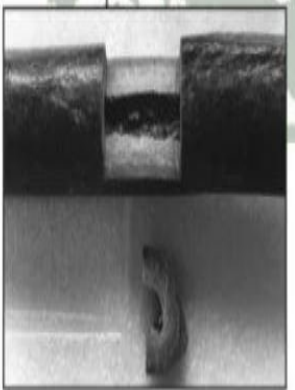

# Exhuming new light: On 2022 Medicine Nobel

Svante Paabo's Medicine Nobel win should inspire biologists to shun academic straitjacket

Neanderthal

Denisova cave

# ARTICLE

The Nobel Prize for Medicine this year will be awarded to Svante Pääbo, a Swedish geneticist and a director of the Max Planck Institute for Evolutionary Anthropology in Leipzig, Germany. Science being of an increasingly collaborative and competitive nature, recent trends in Nobel Prizes suggest that there are usually multiple winners for every prize. It is a tribute to the originality and revolutionary implications of Pääbo's research that in a world perennially reshaped by advances in biology, he has been chosen as the lone

# ARTICLE

Much like the latter placed the sun at the centre and demoted the earth to another circumscribed, perambulatory planet, Pääbo brought Neanderthals — believed to be among the many human-like species and losers of the evolutionary race — to the centre on the question of human evolution. Thanks to his work, it is now known that Europeans and Asians carry anywhere between 1%-4% of Neanderthal DNA. Thus, a large fraction of humanity will be influenced in terms of propensity to disease and adaptability to conditions by a species that evolved, like humans, in Africa, but 1,00,000 years earlier.

# ARTICLE

By building on these methods, Pääbo and his colleagues eventually published the first Neanderthal genome sequence in 2010. To put that in perspective, the first complete sequence of the human genome was only completed in 2003. Comparative analyses with the human genome demonstrated that the most recent common ancestor of Neanderthals and Homo sapiens lived around 8,00,000 years ago; that both species frequently lived in proximity and interbred to an extent that the Neanderthal genetic stamp lives on.

In 2008 a 40 000-year-old fragment from a

# ARTICLE

This was the first time that a new species had been discovered based on DNA analysis. Further analysis showed that it too had interbred with humans and 6% of human genomes in parts of South East Asia are of Denisovan ancestry. These discoveries throw up philosophical questions on what it means to be a 'species'. Pääbo's win must inspire future biologists in India to pursue deep questions and use science to shed new light rather than compartmentalise themselves in an academic straitjacket.
