‘Vaccines prevented 42 lakh deaths in India’

Study published in Lancet Infectious Diseases based its findings on estimates of excess mortalities

ARTICLE

Vaccines against COVID19 prevented over 42 lakh deaths in India in 2021, said a study published in Lancet Infectious Diseases, which based its findings on estimates of "excess" mortalities in the country during the pandemic. India began its COVID19 vaccination drive in January 2021 and as per records released by the Health Ministry, till date, the cumulative vaccination coverage exceeds 196.62 crore, making the programme one of the world's fastest vaccination drives. Globally, the mathematical modelling study found COVID19 vaccines reduced the potential death toll during the pandemic by nearly 20 million or more than half in the year following the implementation of vaccine drives.

ARTICLE

The researchers used a model based on country level data for officially recorded COVID19 deaths occurring between December 8, 2020 and December 8, 2021. “For India, we estimate that 42,10,000 deaths were prevented by vaccination in this period,” lead author of the study, Oliver Watson from the Imperial College London, U.K., said in his statement. The study is based on data from 185 countries and it found high and upper middle income countries accounted for the greatest number of prevented deaths (1.22 crore/1.98 crore), highlighting inequalities around the world. “These figures are based on the estimates of excess mortality in India during the COVID19 pandemic, which we have sourced from The Economist and are similar to the estimates that the World Health Organization (WHO) reported.

ARTICLE

Independently, our group has also investigated the COVID19 death toll based on reports of excess mortality and **seroprevalence** surveys and arrived at similar estimates of almost 10 times the official count," the lead author said. According to the estimates by The Economist, 2.3 million people died in India from COVID19 by the start of May 2021, as against official figures of around 2,00,000. The WHO had last month estimated that there were 4.7 million COVID linked deaths in India, a figure that was **refuted** by the government. The research added that what this modelling study shows is that the vaccination campaign in India has likely saved millions of lives.
